Home Use of Desensitizing Gel

Soothe is a topical desensitizing gel containing 6% potassium nitrate and 0.10% fluoride ions. It is designed to relieve tooth sensitivity caused by chemical and thermal changes.

Instructions for Use:

1. Dispense Soothe Desensitizing Gel into whitening trays.
2. Place the trays into mouth for 10 minutes.
3. Do not eat or drink for at least 10 minutes after removing trays.
4. Repeat every 3 hours until symptoms have subsided.

Precaution:

1. Soothe Desensitizing Gel is to be used under the supervision of a dental professional.
2. Do not use if you have any known allergies to the listed composition.
3. Keep product out of direct sunlight.
4. Store at room temperature.
5. Excessive amounts should not be swallowed.
6. Keep out of reach of children.
